REVIEWER INDEX

to Volume 129, September–December, 1991

Below is a list of the people who reviewed manuscripts for GENETICS during the preparation of Volume 129. The aim of GENETICS is to communicate significant research. To succeed, we must recognize what is significant, making sure the presentation is accurate, unambiguous and easily readable. For this, we depend heavily on our reviewers, who perform this indispensable service without reward. The quality of the journal strongly reflects the quality of their efforts. We apologize to any reviewer whose name has been inadvertently omitted, and we are sincerely grateful to all.

SUBJECT INDEX

to Volume 129, September–December 1991

Acridine, mutagen ICR-191, specificity of base substitutions, guanine N7 adducts, 981
Adenylate cyclase, yeast mutations, deletion of *SNF1*, nutrient response, 697
Age-dependent sexually asymmetric selection, use of intrinsic values, 949
Albino-deletion complex, development of embryonic and extraembryonic ectoderm, mouse, 825
Allele
  al-MUM2, *Mutator* transposeable element *MuA2*, maize, 845
  DER/*flb*, interallelic complementation, *Drosophila*, 191
  Esterase-5, selection *vs.* hitchhiking, *Drosophila pseudoobscura*, 145
  female-specific lethal mutations, gene *Sxl*, *Drosophila melanogaster*, 371
  nod, *lethal(1)TW-6*^{cs} mutation, *Drosophila melanogaster*, 409
  polymorphism, molecular basis, *Globulin-1* gene in maize, 863
  variance of neutral genetic variances, within and between populations, quantitative character, 535
Allozyme
  genic variation in natural populations, *Drosophila melanogaster*, 103
  polymorphism, *Adh* expression, *Drosophila melanogaster*, 481
Arabidopsis thaliana, qualitative and quantitative genetic studies, perspectives, 605
ATP-binding domain, *lethal(1)TW-6*^{cs} mutation, *Drosophila melanogaster*, 409
Autogamy, permanent rescue of non-Mendelian mutation, specific DNA sequences, *Paramecium tetraurelia*, 727

Bacteria, transient mutators, semiquantitative analysis, translation and transcription errors, 957
Bacteriophage λ, chain bias in chi-stimulated heteroduplex patches, λ *ren* gene, *Escherichia coli*, 611
Breeding, tactics, gene flow, diversity within populations, 573

Caenorhabditis elegans, 69, 95, 735, 1061
Calmodulin, mutation, intragenic suppressor, *Paramecium tetraurelia*, 717
Candida albicans, repeated use of *GAL1*, gene disruption, 19
Cattle, rapid segregation of mtDNA, 247
Caulobacter crescentus
  genetic analysis, temporally transcribed chemotaxis gene cluster, 333
  polar morphogenesis and differentiation, cell division genes, pseudoreversion analysis, 623
Cell cycle
  cell division genes, polar morphogenesis and differentiation, *Caulobacter crescentus*, 623
  genetics, perspectives, 975
  temporally transcribed chemotaxis gene cluster, genetic analysis, *Caulobacter crescentus*, 333
Cell death, programmed, genes required for engulfment of cell corpses, *Caenorhabditis elegans*, 79
Chemotaxis, gene cluster, gene analysis, *Caulobacter crescentus*, 333
Chloroplast, DNA, hot spot region, wheat, 873
Chromatid, recombinant, segregation following mitotic crossing over, yeast, 359
Chromatin, suppressor of silencing defects, *SUM1-1*, yeast, 685
Chromosome
  ability of segment to invert, included material rather than flanking system, *Salmonella typhimurium*, 1021
  breakage by pairs, *Ac-Ds* family, maize, 855
  components of segregation distortion, *Drosophila melanogaster*, 133
  control of large duplications, mismatch repair system, *Escherichia coli*, 327
  evolution, lack of underdominance, *Drosophila melanogaster*, 791
  fourth, lack of polymorphism, *Drosophila*, 1111
  inversely oriented IS*3* elements, large inversion, *Escherichia coli*, 639
  inversion polymorphisms, linkage disequilibrium analysis, *Drosophila mediopunctata* and *D. subobscura*, 773
  inversion termini, mapping by transposons, *Escherichia coli*, 631
  rearrangement by ectopic recombination, *Drosophila melanogaster*, 1073
  second, female sterile mutations, *Drosophila melanogaster*, 1119
  segregation, *lethal(1)TW-6*^{cs} mutation, *Drosophila melanogaster*, 409
Chromosome *17*, hybrid sterility locus, origin of *t* haplotypes, mouse, 237
Chromosome *III*, circular derivative of yeast, map, location of *ARS* elements, 343
Chromosome *X*
  distal portion, molecular population genetics, *Drosophila*, 1147
  P element, maternally inherited regulation, *Drosophila melanogaster*, 501
Chromosome *Y*
  fine mapping of satellite DNA sequences, *Drosophila melanogaster*, 177

intermale aggression, dependence, maternal environment, 231
Coalescent theory, pairwise comparisons of mitochondrial DNA sequences, stable and exponentially growing populations, 555
Codon
synonymous, selection-mutation-drift theory, *Escherichia coli*, 897
translation and transcription errors, mutation rates, transient mutators, 957
Cruciforms, deletion of inverted repeated DNA, *Escherichia coli*, 991
Cyclic AMP, activation of adenylate cyclase pathway, deletion of *SNF1*, nutrient response in yeast, 697
Cytoplasm, incompatibility types, geographic distribution and inheritance, *Drosophila simulans*, 399

Deletion, *PH1*, DNA fragment, polyploid wheat, 257
Disequilibrium
Apo B gene region, genotype-phenotype relationships, 525
pairwise, additional constraints, three-locus systems, 925
selection and hitchhiking, three-linked loci, application to HLA data, 931
variance of neutral genetic variances, within and between populations, quantitative character, 535
DNA
Broad-Complex, related proteins containing zinc fingers, *Drosophila melanogaster*, 385
chain bias in chi-stimulated heteroduplex patches, λ *ren* gene, *Escherichia coli*, 611
chloroplast, hot spot region, wheat, 873
fine mapping of satellite DNA sequences, *Y* chromosome, *Drosophila melanogaster*, 177
fragment mapped within submicroscopic deletion of *Ph1*, polyploid wheat, 257
genomic, source of small repeats, 563
heteroduplex, replication and recombination, poxvirus-infected cells, 7
inverted repeated, deletion, *Escherichia coli*, 991
mushroom-inducing sequence, *Schizophyllum commune*, 707
mutants affecting processing, macronuclear development, *Paramecium*, 47
nonreplicating phage, methyl-directed mismatch repair system, *Escherichia coli*, 1007
polymorphisms, natural populations, *Drosophila melanogaster*, 753
sequence polymorphisms, intragenic recombination of *rosy* locus, *Drosophila melanogaster*, 779
sequence variation and *Adh* expression, natural population, *Drosophila melanogaster*, 489
seven-base-pair inverted repeats, stable hairpins, yeast, 669
specific sequences, permanent rescue of non-Mendelian mutation, *Paramecium tetraurelia*, 727
suppressor of silencing defects, *SUM1-1*, yeast, 685
DNA, mitochondrial
bovine, replacement by sequence variant within one generation, 247
duplications, evolutionary dynamics, *Heteronotia binoei*, 221
genic variation in natural populations, *Drosophila melanogaster*, 103
male sterility-associated *pcf* gene, normal *atp9-1* gene, petunia, 885
origin and evolution, parthenogenesis, *Heteronoatia binoei*, 211
sequences, pairwise comparisons, stable and exponentially growing populations, 555
DNA, ribosomal, *Rex* and a suppressor of *Rex*, repeated neomorphic loci, *Drosophila melanogaster*, 119
DNA repair, extrachromosomal recombination, derangement in *rec2* mutant, *Ustilago maydis*, 1053
Drosophila, 169, 1111
Drosophila mediopunctata, 773
Drosophila melanogaster, 1, 103, 119, 133, 177, 203, 371, 385, 409, 423, 443, 481, 489, 501, 753, 763, 779, 783, 791, 803, 1073, 1099, 1119, 1137, 1147
Drosophila pseudoobscura, 145
Drosophila simulans, 1, 399, 1147
Drosophila subobscura, 773

Ecdysone-induced puffing cascade, salivary glands, *Drosophila*, 169
Ectoderm, embryonic and extraembryonic, albino-deletion complex, mouse, 825
Element
Ac-Ds family in maize, chromosome breakage by pairs, transposeable elements, 855
Ac transposition, clusters of insertions, tomato gene, 833
ARS, circular derivative of yeast, map, 343
inversely oriented IS*3* near *lac* and *cdd*, large inversion, *Escherichia coli*, 639
silencer *SUM1-1*, yeast, 685
Embryogenesis
gonadal dysgenesis, sexual dimorphism, *Drosophila melanogaster*, 203
head involution defective locus, *Drosophila melanogaster*, 783
Enzymes, population genetics, sexual/asexual life cycle, germline selection, 1167
Epidermal growth factor, interallelic complementation among DER/*flb* alleles, *Drosophila*, 191
Escherichia coli, 317, 327, 611, 631, 639, 647, 897, 981, 991, 1007
Evolution
chromosome, lack of underdominance, *Drosophila*

melanogaster, 791
chromosome *17* hybrid sterility locus, origin of *t* haplotypes, mouse, 237
dynamics of mitochondrial DNA duplications, *Heteronotia binoei*, 221
genealogy of neutral genes, selected mutations, geographically structured population, 585
low nucleotide diversity in man, 513
morphological differences, genetic analysis, maize and teosinte, 285
origin and, parthenogenesis, *Heteronoatia binoei*, 211
Eye, pigments, *rosy* locus, *Drosophila melanogaster*, 1099

Fertility, fine mapping of satellite DNA sequences, *Y* chromosome, *Drosophila melanogaster*, 177
Fruiting bodies, mushroom-inducing DNA sequence, *Schizophyllum commune*, 707

Gene
Adh
allozyme polymorphism, *Drosophila melanogster*, 481
DNA sequence variation in natural population, *Drosophila melanogaster*, 489
sequences regulating larval expression, *Drosophila melanogaster*, 763
Apo B, genotype-phenotype relationships, 525
Broad-Complex, ecdysone-induced puffing cascade, *Drosophila* salivary glands, 169
cell division, polar morphogenesis, *Caulobacter crescentus*, 623
COX3, site-directed mutagenesis, yeast, 659
engulfment of cell corpses, programmed cell death, *Caenorhabditis elegans*, 79
flow, breeding tactics, diversity within populations, 573
GAL1, repeated use for gene disruption, *Candida albicans*, 19
GAL11 and *GRR1*, *SUC2* expression, yeast, 675
Globulin-1, allelic polymorphism, maize, 863
lacI, spontaneous mutation, *Escherichia coli*, 317
male sterility-associated *pcf*, normal *atp9-1* gene and, petunia, 885
neutral, genealogy, geographically structured population, 585
neutral variance, within and between populations, quantitative character, 535
perspectives, 313
pha-1, organ-specific differentiation, *Caenorhabditis elegans*, 69
λ *ren*, chain bias, *Escherichia coli*, 611
Sex combs reduced
embryonic and imaginal stages of development, *Drosophila melanogaster*, 443
functional and structural analysis, *Drosophila melanogster*, 423
singed, structure and transcription, *Drosophila melanogaster*, 1073
submicroscopic deletion of *Ph1*, DNA fragment, 257
swi6, prohibition of meiotic recombination, "cold spot" of fission yeast, 1033
Sxl, female-specific lethal mutations, *Drosophila melanogaster*, 371
temporally transcribed chemotaxis, genetic analysis, *Caulobacter crescentus*, 333
trans-acting regulatory, *white/brown/scarlet* loci, *Drosophila*, 463
vermilion, splicing of retrotransposon insertions, *Drosophila melanogaster*, 1137
yellow-achaete, distal portion of *X* chromosome, *Drosophila*, 1147
Genetic gain, multistage selection, orthogonal transformation, 963
Genome
chromosome rearrangement, ectopic recombination, *Drosophila melanogaster*, 1073
genetic analysis of major segment [LGV(left)], *Caenorhabditis elegans*, 735
host stability, doubling Ty*1* element copy number, yeast, 1043
micronuclear rearrangements, Tel-1 transposon-like elements, *Tetrahymena thermophila*, 57
tomato, *Ac* transposition, clusters of insertions, 833
Genomic imprinting, escape from, mouse *T-associated maternal effect* locus, 1159
Genotype-phenotype relationships, *Apo B* gene region, 525
Germline
embryonic, sexual dimorphism, *Drosophila melanogaster*, 203
normal development, grandchildless loci, *Caenorhabditis elegans*, 1061
selection, population genetic aspects, sexual/asexual life cycle, 1167
Glucose, *GAL11* and *GRR1*, *SUC2* expression, yeast, 675
Gonad, dysgenesis, sexual dimorphism in embryonic germline, *Drosophila melanogaster*, 203
Guanine, N7 adducts, mutagenesis, acridine mutagen ICR-191, 981

Hairpin, stable, seven-base-pair inverted repeats in DNA, yeast, 669
Haplotypes, *t*, chromosome *17* hybrid sterility locus, mouse, 237
Heterokaryosis, expression of meiotic drive elements, *Spore killer-2* and *Spore killer-3*, asci of *Neurospora tetrasperma*, 25
Heteronoatia binoei, origin and evolution, parthenogenesis, 211
Hitchhiking
selection and disequilibrium analysis, three-linked loci, application to HLA data, 931
vs. selection, major alleles of *Esterase-5*, *Drosophila*

pseudoobscura, 145
yellow-achaete region, distal portion of *X* chromosome, *Drosophila*, 1147
HLA complex
three-locus systems
additional constraints, pairwise disequilibria, 925
selection, hitchhiking and disequilibrium, 931
Homo sapiens, low nucleotide diversity, 513
Hybrid dysgenesis
gonadal dysgenesis, sexual dimorphism in embryonic germline, *Drosophila melanogaster*, 203
maternally inherited regulation, *P* elements, *Drosophila melanogaster*, 501

ICR-191, mutagenesis, guanine N7 adducts, *Escherichia coli*, 981
Insertions, retrotransposon, splicing from transcripts, *Drosophila melanogaster vermilion* gene, 1137
Inversion
ability of bacterial chromosome segment, included material rather than flanking sequence, *Salmonella typhimurium*, 1021
chromosomal, polymorphisms and linkage disequilibrium, *Drosophila mediopunctata*, 773
large, inversely oriented IS*3* elements, *Escherichia coli*, 639
naturally occurring pericentric, lack of underdominance, *Drosophila melanogaster*, 791
termini in *Escherichia coli*, mapping by transposons, 631
Invertase, depression of *SUC2* expression, *GAL11* and *GRR1*, yeast, 675

Kinensin-like proteins, *lethal(1)TW-6*^{cs} mutation, *Drosophila melanogaster*, 409

Linkage, symmetric model, sex determination, 297
Linkage disequilibrium, analysis of chromosomal inversion polymorphisms, *Drosophila mediopunctata, D. subobscura*, 773
Locus
bli-4 (i), mutations, *Caenorhabditis elegans*, 95
Enhancer of split, early neurogenesis, *Drosophila melanogaster*, 803
grandchildless, requirement for normal germ-line development, *Caenorhabditis elegans*, 1061
head involution defective, embryonic head involution, *Drosophila*, 783
lac and *cdd*, inversely oriented IS*3* elements, *Escherichia coli*, 639
mtr, spontaneous mutation, *Neurospora*, 39
rosy
DNA sequence polymorphisms, *Drosophila melanogaster*, 779
Drosophila melanogaster, 1099
Sd, components of segregation distortion, *Drosophila melanogaster*, 133
Sex combs reduced
embryonic and imaginal stages of development, *Drosophila melanogster*, 443
functional and structural analysis, *Drosophila melanogaster*, 423
singed, structure and transcription, *Drosophila melanogaster*, 1073
T-associated maternal effect, escape from genomic imprinting, mouse, 1159
three-
additional constraints, pairwise disequilibria, 925
selection/hitchhiking/disequilibrium, HLA data, 931
white/brown/scarlet, *trans*-acting regulatory gene, *Drosophila*, 463

Macronucleus, mutants affecting processing of DNA, paramecium, 47
Maize
Ac-Ds family, chromosome breakage by pairs, transposeable elements, 855
Globulin-1 gene, molecular basis, allelic polymorphism, 863
meiotic instability of *R-r* complex, displaced intragenic exchange, 271
regulatory transposon, *Mutator* transposeable element system, 261
somatic mutability of *al-MUM2* allele, cloning, *Mutator* transposeable element *MuA2*, 845
teosinte and, genetic analysis, morphological differences, 285
Maltodextrins, mutant bias in nonlethal selections, selective recovery, *Escherichia coli*, 647
Mapping
linkage, mathematical model of interference, yeast, 597
location of *ARS* elements, circular derivative of yeast, 343
Maternal effect, maternal environment, *Y* chromosome effect on intermale aggression, mouse, 231
Mathematical model, interference, construction of linkage maps, yeast, 597
Mating
suppressor of silencing defects, *SUM1-1*, yeast, 658
tactics, gene flow and breeding, diversity within populations, 573
Meiosis, prohibition of recombination, *swi6* gene, "cold spot" of fission yeast, 1033
Meiotic drive
components of segregation distortion, *Drosophila melanogaster*, 133
elements *Spore killer-2* and *Spore killer-3*, asci, *Neurospora tetrasperma*, 25
Meiotic instability, *R-r* complex, displaced intragenic exchange, maize, 271
Metabolic control theory, mutation-selection balance, 909
Metamorphosis, *Broad-Complex*, related proteins containing zinc fingers, *Drosophila melanogaster*,

385
Migration, gene flow and breeding tactics, gene diversity within populations, 573
Mismatch repair system
control of large chromosomal duplications, *Escherichia coli*, 327
methyl-directed, recombinagenic processing, *Escherichia coli*, 1007
Mitochondria
geographic distribution and inheritance, cytoplasmic incompatibility types, *Drosophila simulans*, 399
translation initiation codon, site-directed mutagenesis, yeast, 659
Mitosis, crossing over in yeast, segregation, recombinant chromatids, 359
Morphogenesis, polar, cell division genes, *Caulobacter crescentus*, 623
Mouse
chromosome *17* hybrid sterility locus, origin of *t* haplotypes, 237
development of embryonic and extraembryonic ectoderm, albino-deletion complex, 825
T-associated maternal effect locus, escape from genomic imprinting, 1159
Y chromosome effect on intermale aggression, dependence, maternal environment, 231
Mutagenesis
genetic analysis of major segment [LGV(left)], *Caenorhabditis elegans*, 735
molecular basis of difference in *Adh* expression, allozyme polymorphism, *Drosophila melanogaster*, 481
site-directed, mitochondrial translation initiation codon, yeast, 659
specificity of base substitutions, acridine mutagen ICR-191, guanine N7 adducts, 981
Mutants
bias in nonlethal selections, *Escherichia coli*, 647
processing of DNA, macronuclear development, *Paramecium*, 47
rec2, extrachromosomal recombination, *Ustilago maydis*, 1153
Mutation
albino-deletion complex, embryonic and extraembryonic ectoderm, mouse, 825
bli-4 (I) locus, *Caenorhabditis elegans*, 95
calmodulin, intragenic suppressor, *Paramecium tetraurelia*, 717
deletion of inverted repeated DNA, *Escherichia coli*, 991
female-specific lethal, gene *Sxl*, *Drosophila melanogaster*, 371
female sterile, second chromosome, *Drosophila melanogaster*, 1119
grandchildless loci, normal germline development, *Caenorhabditis elegans*, 1061
length, hot spot region, wheat chloroplast DNA, 873
lethal(1)TW-6^{cs}, ATP-binding domain, *Drosophila melanogaster*, 409
Mutator transposeable element system, regulatory transposon, maize, 261
-selection balance, metabolic control theory, 909
spontaneous
lacI gene, 317
mtr locus, *Neurospora*, 39
source of small repeats, genomic DNA, 563
Mutators, transient, semiquantitative analysis, translation and transcription errors, 957

Neurogenesis, early, *Enhancer of split* locus, *Drosophila melanogaster*, 803
Neurospora, 39
Neurospora tetrasperma, 25
Nucleotide, low diversity in man, 513
Nutrients, deletion of *SNF1*, activation of adenylate cyclase pathway, yeast mutants, 697

Oogenesis, female sterile mutations, second chromosome, *Drosophila melanogaster*, 1119

Palindrome, seven-base-pair inverted repeats in DNA, stable hairpins, yeast, 669
Paramecium tetraurelia
calmodulin mutation, intragenic suppressor, 717
mutants affecting processing of DNA, macronuclear development, 47
permanent rescue of non-Mendelian mutation, microinjection, specific DNA sequences, 727
Parthenogenesis, origin and evolution, *Heteronotia binoei*, 211
Perturbation-reperturbation test, selection *vs.* hitchhiking, major alleles of *Esterase-5*, *Drosophila pseudoobscura*, 145
Petunia, male sterility-associated *pcf* gene, normal *atp9-1* gene, 885
Phenotype-genotype relationships, *Apo B* gene region, 525
Plasmid
extrachromosomal recombination, derangement in *rec2* mutant, *Ustilago maydis*, 1053
sequences regulating larval expression, *Adh* gene, *Drosophila melanogaster*, 763
Polymorphism
age-dependent sexually asymmetric selection, use of intrinsic values, 949
allelic, molecular basis, *Globulin-1* gene in maize, 863
allozyme, *Adh* expression, *Drosophila melanogster*, 481
chromosomal inversion, linkage disequilibrium, *Drosophila mediopunctata* and *D. subobscura*, 773
DNA
natural populations, *Drosophila melanogaster*, 753
rosy locus, *Drosophila melanogaster*, 779

lack of, selection, *Drosophila* fourth chromosome, 1111
restriction fragment length
Apo B gene region, genotype-phenotype relationships, 525
map and location of *ARS* elements, circular derivative of yeast, 343
rapid segregation, bovine mtDNA, 247
Population
gene diversity, gene flow, breeding tactics, 573
genetics, sexual/asexual life cycle, germline selection, 1167
geographically structured, genealogy, neutral genes, 585
geographic distribution and inheritance, cytoplasmic incompatibility types, *Drosophila simulans*, 399
low nucleotide diversity in man, 513
mutation-selection balance, metabolic control theory, 909
natural
DNA sequence variation and *Adh*, *Drosophila melanogaster*, 489
genetic structure, *Drosophila melanogaster*, 753
genic variation, *Drosophila melanogaster*, 103
stable and exponentially growing, pairwise comparisons, mitochondrial DNA sequences, 555
variance of neutral genetic variances, quantitative character, 535
Poxvirus-infected cells, heteroduplex DNA formation, replication and recombination, 7
Protein kinase, deletion of *SNF1*, adenylate cyclase pathway, nutrient response of yeast, 697
Pseudohomothallism, expression of meiotic drive elements, *Spore killer-2* and *Spore killer-3*, asci of *Neurospora tetrasperma*, 25

Receptors-tyrosine kinases, interallelic complementation among DER/*flb* alleles, *Drosophila*, 191
Recombination
chain bias in chi-stimulated heteroduplex patches, λ *ren* gene, *Escherichia coli*, 611
ectopic, chromosome rearrangement, *Drosophila melanogaster*, 1073
extrachromosomal, derangement in *rec2* mutant, *Ustilago maydis*, 1053
intragenic, DNA sequence polymorphisms, *Drosophila melanogaster*, 779
large inversion in *Escherichia coli*, inversely oriented IS*3* elements, *lac* and *cdd*, 639
linkage in a symmetric model, sex determination, 297
meiotic, *swi6* gene, "cold spot" of fission yeast, 1033
meiotic instability of *R-r* complex, displaced intragenic exchange, 271
replication and, heteroduplex DNA formation, poxvirus-infected cells, 7
segregation of recombinant chromatids, mitotic crossing over, yeast, 359
Reproduction, sexual/asexual life cycle, population genetic aspects, germline selection, 1167
Retrotransposon
prohibition of meiotic recombination, *swi6* gene, "cold spot" of fission yeast, 1033
splicing of insertions from transcripts, *vermilion* gene, *Drosophila melanogaster*, 1137
Revertants
head involution defective locus, *Drosophila melanogaster*, 783
splicing of retrotransposon insertions, transcripts, *Drosophila melanogaster vermilion* gene, 1137

Saccharomyces cerevisiae, 343, 359, 597, 659, 669, 675, 685, 697, 1033, 1043
Salivary glands, ecdysone-induced puffing cascade, *Drosophila*, 169
Salmonella typhimurium, 1021
Sampling, variance of neutral genetic variances, within and between populations, quantitative character, 535
Schizophyllum commune, mushroom-inducing DNA sequence, 707
Segregation distortion, components of, *Drosophila melanogaster*, 133
Selection
age-dependent sexually asymmetric, use of intrinsic values, 949
balance, mutation, metabolic control theory, 909
distal portion of *X* chromosome, hitchhiking of *yellow-achaete* region, *Drosophila*, 1147
hitchhiking and disequilibrium analysis, three-linked loci, application to HLA data, 931
lack of polymorphism, *Drosophila* fourth chromosome, 1111
multistage, genetic gain, orthogonal transformation, 963
-mutation-drift theory, synonymous codon usage, *Escherichia coli*, 897
nonlethal, mutant bias, *Escherichia coli*, 647
vs. hitchhiking, major alleles of *Esterase-5*, *Drosophila pseudoobscura*, 145
Serotypes, mutants affecting processing of DNA, *Paramecium*, 47
Sex determination, linkage in a symmetric model, 297
Sexual assymmetry, age-dependent selection, use of intrinsic values, 949
Sexual dimorphism, gonadal dysgenesis, embryonic germline, *Drosophila melanogaster*, 203
Spermatogenesis, components of segregation distortion, *Drosophila melanogaster*, 133
Spore killers, *Spore killer-2* and *Spore killer-3*, meiotic drive elements, asci of *Neurospora tetrasperma*, 25
Sterility, chromosome *17* hybrid sterility locus, origin of *t* haplotypes, mouse, 237
Sturtevant, Alfred Henry, crosses between *Drosophila*

melanogaster, Drosophila simulans, 1
Suppressors
organ-specific differentiation gene *pha-1*, *Caenorhabditis elegans*, 69
Rex, repeated neomorphic loci, *Drosophila melanogaster* ribosomal DNA, 119
Synapsis, meiotic instability of *R-r* complex, displaced intragenic exchange, 271

T-DNA, *Ac* transposition, clusters of insertions, tomato gene, 833
Teosinte, maize and, genetic analysis, morphological differences, 285
Tetrahymena thermophila, Tel-1 transposon-like elements, micronuclear genome rearrangements, 57
Tomato, genome, *Ac* transposition, clusters of insertions, 833
Transcription, ecdysone-induced puffing cascade, *Drosophila* salivary glands, 169
Transposeable element
chromosome breakage by pairs, *Ac-Ds* family, maize, 855
doubling Ty*1* element copy number, host genome stability, yeast, 1043
Mutator, regulatory transposon, maize, 261
Mutator MuA2, somatic mutability of *al-Mum2* allele, maize, 845
P, maternally inherited regulation, *Drosophila melanogaster*, 501
Transposon
chromosome rearrangement, ectopic recombination, *Drosophila melanogaster*, 1073
-like elements Tel-1, micronuclear genome rearrangements, *Tetrahymena thermophila*, 57
mapping, inversion termini, *Escherichia coli*, 631
prohibition of meiotic recombination, *swi6* gene, "cold spot" of fission yeast, 1033
Tyrosine kinase-receptor, interallelic complementation among DER/*flb* alleles, *Drosophila*, 191

Ultraviolet light, photoproducts in nonreplicating phage DNA, recombinagenic processing, *Escherichia coli*, 1007
Ustilago maydis, derangement in *rec2* mutant, extrachromosomal recombination, 1053

Wheat
chloroplast DNA, hot spot region, length mutations, 873
polyploid, DNA fragment, submicroscopic deletion of *Ph1*, 257

Xanthine dehydrogenase, *rosy* locus, *Drosophila melanogaster*, 1099

Yeast
analysis of circular derivative chromosome *III*, map, location of *ARS* elements, 343
doubling Ty*1* element copy number, host genome stability, phenotypic effects, 1043
GAL11 and *GRR1*, *SUC2* expression, 675
mathematical model of interference, construction, linkage maps, 597
mat2-mat3 "cold spot", *swi6* gene, prohibition of meiotic recombination, 1033
mutations which activate adenylate cyclase pathway, deletion of *SNF1*, nutrient response, 697
seven-base-pair inverted repeats in DNA, stable hairpins, 669
site-directed mutagenesis, mitochondrial translation initiation codon, 659
SUM1-1, suppressor of silencing defects, 685

Zinc, fingers, *Broad-Complex*, *Drosophila melanogaster*, 385
